PROFILE

I am currently a third-year PhD student at HLT@SUDA, advised by Prof. Guohong Fu. I expect to graduate in 2025. Prior to this, I received my M. Eng. degree from Soochow University in 2021.

My early research focused on structured prediction tasks, specifically dependency parsing and constituency parsing. Currently, my research interests have evolved to focus on developing efficient text generation models. I am particularly intrigued by the prospect of developing hardware-efficient methods for linear-time sequence modeling. As a disciple of parallel programming, I am passionate about exploring techniques that harness the power of parallel computing to develop scalable subquadratic models.

PROJECTS

- **FLA**: A Triton-Based Library for Hardware-Efficient Implementations of Linear Attention Mechanism.
- **SuPar**: State-of-the-art syntactic/semantic parsers (760 stars, 21k downloads)
A Python package designed for structured prediction, including reproductions of many state-of-the-art syntactic/semantic parsers (with pretrained models for more than 19 languages), and highly-parallelized implementations of several well-known structured prediction algorithms.

EDUCATION

- 2018.9 - 2021.6. *Master of Computer Science* from **Soochow University**
- 2014.9 - 2018.6. *Bachelor of Engineering* from **Soochow University**

EXPERIENCE

- 2021 - present. PhD student at Soochow University, advised by Prof. Guohong Fu.
- 2023 - 2024. Research Intern at Tencent AI Lab, mentored by Wei Bi.
- 2020 - 2021. Research Intern at Alibaba DAMO Academy, mentored by Yong Jiang.
- 2018 - 2021: M.S. student at Soochow University, advised by Prof. Zhenghua Li.
